REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: The claimed invention is drawn to the following:

18. (Previously presented) A recording material for the production of offset printing plates, which comprises a web- or plate-form support, a radiation-sensitive layer on the front of the support and a continuous, pigment particle-free layer on the back, and the back layer consists essentially of an organic polymeric material having a glass transition temperature Tg of at least 45°C, and said material has a surface and said surface has a Bekk smoothness of from 5 to 800 s.

None of the references of record anticipate or render obvious the claimed invention. Newly cited reference to DENZINGER et al (2002/0182533) claims a similar backing layer, wherein the recited glass transition temperature range of at least 55 °C is within the range of the claimed Tg of the backing layer. However the claims require a conductive pigment which is excluded in the current claim 18 and thus the currently claimed recording material would not possess the claimed surface resistance of DENZINGER '533 because it lacks the conductive pigment as claimed. Further the filing date to the U.S. Patent Publication is March 1, 2002 which is after the current filing date of December 13, 2001 and does not qualify as prior art.

Because of the reasons stated above and because of the arguments by applicant against NARUSE et al (EP 883,028) are persuasive, claims 18-37 are seen as allowable and passed to issue.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue

fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
